LeetCode | GeeksforGeeks | Location: Pune, Maharashtra

EDUCATION

M.B.M University

Bachelor of Engineering in Computer Science Engineering

Jodhpur, Rajasthan

May 2021 – May 2025

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, HTML/CSS, Python

Frameworks: Spring Boot, React, Node.js, Express, REST APIs, Hibernate, JPA, Liquibase

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, CI/CD, Git, Jenkins

Databases: PostgreSQL, MongoDB, Redis

Tools: JWT/OAuth, Microservices, Puppeteer, Payment Gateways, Jira, System Design

EXPERIENCE

Software Engineer Trainee

June 2025 – Present

Redaptive

Pune, Maharashtra

- Architected secure JWT issuance API using RS256 for internal M2M communication and migrated legacy service to new authentication, enhancing security across microservices ecosystem
- Enhanced our feature flag system by redesigning the schema and improving API functionality, allowing for targeted feature rollouts for over 500 enterprise clients
- Automated the "Non-Submittable" workflow with a 14-day timer, status updates, and an audit trail, which reduced manual intervention by 80 % and improved compliance tracking.

Software Developer Intern

June 2024 – August 2024

GigaGrid

Remote

- Developed a single-session authentication system that prevented concurrent logins, reducing unauthorized access by 95 %. Created an admin dashboard for real-time user management, supporting over 1000 users
- Automated the generation of salary slips using Puppeteer, cutting processing time from 2 hours to just 15 minutes and eliminating manual errors
- Implemented secure workflows using AWS S3 pre-signed URLs and integrated payment gateway APIs, successfully processing over 500 transactions monthly

PROJECTS

SkillExchange Platform | Java 17, Spring Boot, PostgreSQL, Liquibase, REST APIs

June 2025 – Present

- Architected a scalable peer-to-peer microservices backend leveraging **Java 17** and **Spring Boot**, integrating Spring Security and stateless **JWT authentication** to secure complex user workflows.
- Engineered robust data persistence pipelines using **PostgreSQL**; implemented **Liquibase** for automated schema versioning and CI/CD-ready database migrations, ensuring zero-downtime data consistency.
- Designed and optimized high-performance **RESTful APIs** featuring advanced pagination and dynamic filtering criteria, significantly reducing payload size and database query latency for skill-discovery searches.

Library - AI Video RAG Platform | Next.js, Vector Search, Redis

GitHub | Jan 2025 – April 2025

- Architected a highly responsive **Retrieval-Augmented Generation (RAG)** pipeline utilizing Groq (Llama-3) to allow users to interactively query and summarize video transcripts in real-time.
- Built a custom vector search engine by chunking transcript data and utilizing Google Gemini to generate text embeddings, calculating cosine similarity to feed precise contextual data to the LLM.
- Engineered a distributed queueing and **rate-limiting** system using Redis to pace embedding generation, successfully handling strict 20 req/min hardware quotas without dropping user queries.
- Integrated dynamic conversational UI elements including typing states and automatic chunk-retrieval fallbacks, reducing average content consumption time for students by 40%.

LEADERSHIP & OPEN SOURCE

Back End Developer Mentor

March 2024 – April 2024

GDSC MBM

Jodhpur, Rajasthan

- Mentored over 30 students in Spring Boot, REST APIs, and system design during the Study Pods v4.0 bootcamp, fostering a collaborative learning environment.

Open Source Contributor

May 2024 – August 2024

GirlScript Summer of Code

Remote

- Contributed 15+ merged pull requests focusing on backend optimization, adhering to industry-standard Git workflows and enhancing project performance.
